This office action is responsive to communications filed 02/04/2005.

**Claims 1 – 20 are pending.**

1. The abstract of the disclosure is objected to because of the use of legal phraseology such as "means". Correction is required. See MPEP § 608.01(b).

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 – 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 1 recites the limitation "the flow –channel-direction-force component" in line 4. There is insufficient antecedent basis for this limitation in the claim.

5. Each of the claims, 4, 8 and 13 recites the limitation "said flow –channel-direction-force component". There is insufficient antecedent basis for this limitation in the claims.

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1 – 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawai (US Re.33, 649).

Kawai discloses a flow regulating valve (1, 2) having a valve element (2) disposed to be rotatable around an axis that intersects a flow direction, a valve element

Art Unit: 3753

driving means (11), a valve opening degree detecting means (17), a stress detecting means (14), a flow rate calculating means (18) that includes a differential pressure converting means (See eqn. 8 in Col. 5) and control means (21) that is constructed so as to control said valve element driving means (11) by comparing an integrated Flow rate ( $Q_m$ ) and a desired value ( $Q_d$ ) thereof with each other.

It is noted that the device disclosed by Kawai necessarily performs the method recited in claims 13 and 14 in its usual and normal operation.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
